

Checking Encryption Keys on Verifone MX9XX

1. Power on device
2. Press the 1, 5, and 9 buttons on the keypad simultaneously for 2 seconds.
 - a. This step only needs to be performed if an application has been loaded to the device.
3. Once the device displays the login menu (seen below), enter password 166832.

- a.
4. This will bring you to a menu where you are presented different options.
 5. Once in the system menu, select the "Security" tab
 6. Now select the "Key Status" tab
 7. From here, select the "DUKPT" tab
 - a. If you need to check a P2P key, use the arrow on the right side of the page to scroll through the tabs until you see the "ADE" tab. This is where you will find the ADE (P2P) key.
 8. From this screen you can either take an image of the screen or write down the value that you see in Slot 0.
 9. Please send that recording or image to the appropriate entity so that they can understand what key was injected into your device.
